

July 15, 1975

Mr. Charles Montgomery
Rural Route 7
Frankfort, Indiana 46041

Dear Mr. Montgomery:

Re: Issuance of Construction
Plan Permit for the
Frankfort - Clinton County
Sanitary Landfill

You are hereby notified that the Stream Pollution Control Board of the State of Indiana has this 15th day of July, 1975, approved the plans and specifications for Phase I of the above-referenced sanitary landfill project which contains 65 acres located in the NW $\frac{1}{4}$, Section 29, T.22N., R.1W., Clinton County.

The trench method of sanitary landfill operation is proposed. Refuse will be deposited, compacted and covered daily with a minimum of six inches of soil. A final cover of two feet of soil will be applied. No burning will be allowed. Salvage materials will be stored on concrete floors of hog houses and removed regularly.

You are hereby issued construction plan permit SW-178 for Phase I of the subject site with the following conditions:

1. That the maximum trench depth be 20 feet except that in the area north of boring number 5, the maximum depth is to be 15 feet.
2. That no hazardous waste be accepted at this site without prior approval from the Solid Waste Management Section.
3. That upon completion of the initial trench and other preliminary construction, the Solid Waste Management Section be notified so that an inspection can be scheduled. No refuse is to be deposited until the operating permit is issued.
4. That prior to landfilling of Phase 2, additional soil borings and plot plans must be submitted to the Solid Waste Management Section.

Mr. Charles Montgomery

July 15, 1975

5. That coordination be made with the State Highway Commission to satisfy provisions of the Highway Junkyard Control Act, IC-1971, 18-12-1.

These plans and specifications were prepared by Mr. Ray F. Miller, P.E., and submitted on June 26, 1975.

Very truly yours,

Ralph C. Pickard
Acting Technical Secretary
